K&A Clinic Technical Security Verification

Date: 2026-10-08T02:10:46.008Z. Release: patient app 1.0.3 / Android versionCode 4.

Scope and safety

All destructive, guessing, replay and simulated-record tests used loopback Firebase Auth/Firestore emulators under the fixed project ID `demo-ka-security`. No real account or production record was mutated by tests. Manager, staff, patient A, patient B, archived patient and revoked admin fixtures use `example.test` email addresses and fictional records. Real SMTP delivery was suppressed for emulator/test recipients. Production checks used headers, browser navigation, Rules API source retrieval and non-mutating authentication API precheck/missing-token requests. No production passwords were tested. Rules deployment was separately authorized by the user.

The new free Firebase project `ka-clinic-security-test` contains the published rules and an empty Firestore database. The Rules API confirms byte-for-byte equality; attack/CRUD execution used the emulator, not that cloud database. Firebase CLI created the test database in nam5.

Before API evidence uses Git HEAD `392b9a2`; pre-existing uncommitted user changes are excluded from that API baseline. Before rules evidence uses the original working-tree rules. Before/after tests with changed contracts are compatibility failures as well as security failures; they are not all distinct exploitable vulnerabilities. Additional tests were added after the baseline. Stored evidence is preserved; do not interpret the different total counts as identical matrices.

Summary

Evidence	Total	PASS	FAIL
Before remediation	665	618	47
After remediation	785	782	3
api-after.json	65	65	0
apk-after.json	6	6	0
cloud-rules-ka-clinic-security-test.json	1	1	0
cloud-rules-ka-clinic-system.json	1	1	0
dependencies-after.json	3	1	2
headers-after.json	9	9	0
live-after.json	7	7	0
rules-after.json	682	682	0
runtime-after.json	1	1	0
secrets-after.json	4	3	1
ui-after.json	6	6	0

PASS means the observed result matched the stated expectation, including expected permission denials. Open FAILs are retained honestly. This report is verification evidence, not a claim of complete security or a penetration-test certification.

Audit findings and fixes

See initial file:line audit for original locations.

1. Removed public patient-directory reads, patient UID takeover, unrestricted cancellation edits, staff chat spoofing, thread takeover and revoked-manager direct writes. Account mutation is server-only. Clinical records remain staff/manager-owned; patient profile writes go through a server allowlist.

2. Added a server password gateway and custom-token sign-in. Direct password-provider tokens cannot use protected APIs or Firestore data. Five admin failures lock access for 15 minutes; unknown identities and patient sign-ins also have persistent five-attempt buckets. Recovery responses no longer expose email/MRN existence.

3. Replaced plaintext OTP storage with contextual SHA-256, cryptographic generation, five-minute expiry, 30-second transactional send reservation, five guesses and single-use transactional consumption. Signup completion requires a random caller-held proof whose hash is stored and consumed once. OTP email subjects/logs omit the code.

4. Added server-owned OTP security sessions. Admin sessions expire after 30 minutes; active browser events trigger heartbeats. A one-minute warning requires an explicit Keep working action. Normal logout invalidates the current server session and trust cookie; logout-all deletes sessions and revokes refresh tokens.

5. Hardened hashed 30-day device trust and account/device binding. Archived patients and revoked admins are rejected. Push-token registration now checks stored record ownership before binding a UID.

6. Added CSP, HSTS, nosniff, anti-framing, referrer/permissions policy, and API no-store. Android cleartext traffic is disabled with a persisted Expo config plugin; production API URLs require HTTPS. SMTP transport uses port 465 with TLS and Gmail hostname validation.

7. Replaced raw map tooltip HTML with a DOM node whose textContent is populated. Existing map popup escaping, React text rendering and chatbot escaping were reviewed. Browser name-injection test confirms literal markup and no execution.

8. Upgraded vulnerable dependencies including firebase-admin, nodemailer, grpc-js, maintained SheetJS 0.20.3 and transitive packages. Server dependency audit is clean. Remaining upstream advisories are listed below.

Vercel authentication runtime follow-up

The initial release checks covered the static login page but missed a deployed function initialization crash: `jwks-rsa` required the ESM-only `jose` package in a loader without native `require(esm)` support. A scoped `jose@5.10.0` override preserves Firebase Admin 14.5/JWKS 4.1 with a CommonJS-compatible export. The runtime regression disables `require(esm)` and verifies generated RSA keys and rejection of tampered data. The live browser suite now checks admin precheck and three missing-token API guards as well as page rendering. See incident and remediation. This server-only correction does not change the APK or security rules.

User-facing changes

- Install APK 1.0.3 before using the hardened patient flow. Older APKs and password-only client integrations can no longer access protected records. Existing browser sessions must sign in again; legacy raw admin trusted-device entries are ignored and require fresh OTP.

- Admins see a warning after 29 idle minutes and are signed out after 30. Ordinary sign-out clears device trust for the current device; logout-all revokes every server session and refresh token. Patient Sign out all devices now includes the current device.

- Login/recovery errors are generic. Requesting too many passwords/codes is rate limited. Email codes expire after five minutes and permit five guesses.

- Signup uses its own email proof, then completes the normal login OTP flow. New users may receive a second sign-in code after signup.

- Public website booking now directs patients to the authenticated Android app. Appointments are linked to the patient's own MRN; anonymous booking is unavailable.

Remaining limitations and required actions

1. **Rotate the exposed Gemini API key.** Gitleaks found it in historical `landing/src/LandingPage.jsx:957`, commit `87b352d2130fbd7c7c1aa5e4057f397061467083`. Replace the server-side Vercel value, remove unused `VITE_GEMINI_API_KEY` local values, and revoke the old key. No secret value is printed in this report. History was not force-rewritten; revocation is the necessary mitigation. Current tracked/pending source and production client bundles were separately checked.

2. **Two upstream dependency advisories remain.** braces 3.0.3 has a deeply nested pattern stack-exhaustion advisory; node-forge 1.4.0 has an RSA signature-validation advisory. npm reports transitive cascades separately, so counts are affected-package entries, not distinct vulnerabilities. These packages originate in build/development tooling; clinic password/OTP authentication does not invoke the affected code paths. No fixed upstream release was available at audit time. Avoid processing untrusted build inputs and update when patched versions become available. FAILs remain in the summary.

3. Firebase web/Android API keys are public configuration, not service-account credentials. Data protection relies on the tested rules and server session gate. Use separate web and Android keys before applying HTTP-referrer and package/SHA restrictions; applying web-only restrictions to the shared key would break Android/server sign-in. Roll out App Check with web reCAPTCHA/Android Play Integrity providers and callable/API token verification, observe valid clients, then enforce. App Check and key restrictions were recommended, not silently enabled. They are not counted as passed tests.

4. Account-level password buckets can temporarily deny legitimate users when an attacker targets their identity. Remote patient-device revocation now removes both server sessions and the hashed trust token. The client also resets its second-factor UI flag on sign-out. Add edge/IP abuse controls and monitoring; generic responses reduce enumeration but do not establish constant-time behavior.

5. OTP SHA-256 storage satisfies the requested hashing test; a six-digit space is small if database hashes leak. Keep OTP collections server-only, enforce short TTL and guessing limits, and consider keyed HMAC as defense in depth.

6. Server session expiry in Rules is checked on each operation. Revocation/archival denials apply to new requests. A previously authorized client may already hold data in memory; sign-out clears app caches/listeners, but data already downloaded cannot be remotely erased. Remote individual admin trust revocation blocks future trusted logins; a currently active remote session can remain valid until its idle expiry unless logout-all/account revocation is used.

7. Physical Android install, real SMTP receipt, foreground/background/back-button behavior on a phone, clinical workflow regression, authenticated production map/network requests, and App Check enforcement need manual evaluation. Signed APK creation, TypeScript checks, emulator APIs/rules and browser admin idle behavior are automated evidence; onboarding launch was tested on an isolated Android emulator with fresh private data. Signed-in physical-device behavior remains untested.

Manual evaluation checklist (not executed; not counted as PASS)

Identity/data tests below must use a test-configured APK/API and the separate Firebase test project or loopback emulators. The production APK was used only for installation, upgrade and public onboarding smoke checks, without account sign-in.

ID	Steps	Expected	Status
MANUAL-ANDROID	Install release APK on a test phone; use simulated manager-approved MRN; sign in, receive OTP, trust device, restart, revoke trust, log out, press Back	No protected screen after logout; trusted login only while valid; next login after revocation needs OTP	NOT EXECUTED
MANUAL-SMTP	Send only to a dedicated test mailbox; observe delivery and negotiated TLS	OTP received, not logged; certificate-validated TLS on 465	NOT EXECUTED
MANUAL-XSS-NOTES-CHAT	Add script/img-onerror markup to fictional notes and chats; open admin and patient screens	Markup displayed as text; no script/network side effects	NOT EXECUTED
MANUAL-WORKFLOWS	Exercise patient signup/login, booking/cancellation, avatar/profile, staff clinical edits, manager invite/revoke/delete, reports with fictional data	Allowed operations succeed; forbidden operations rejected	NOT EXECUTED
MANUAL-AUTH-NETWORK	In test deployment, capture all authenticated map/report/patient network requests	HTTPS only; no CSP blocks; no PHI in unauthenticated responses	NOT EXECUTED

Reproduction

Install Node 24, Java 21, Chrome, Firebase CLI and Gitleaks. Run `npm ci`, `npm ci --prefix ka-clinic-admin`, and `npm ci --prefix patient-app`. Never point guessing/destructive tests at production.

In terminal 1:

```
firebase emulators:start --project demo-ka-security --only auth,firestore --config firebase.json
```

In terminal 2, from ka-clinic-admin:

```
$env:FIREBASE_EMULATOR_PROJECT_ID='demo-ka-security'
$env:VITE_FIREBASE_PROJECT_ID='demo-ka-security'
npm run dev:emulator -- --port 5178
```

In terminal 3, from repository root, run serially because rules tests clear emulator Firestore:

```
node scripts/security/rules.mjs
node --no-experimental-require-module scripts/security/api.mjs
node scripts/security/runtime.mjs
node scripts/security/ui.mjs
npm run build --prefix ka-clinic-admin
Push-Location patient-app
npx tsc --noEmit
Pop-Location
node scripts/security/headers.mjs
node scripts/security/live.mjs
node scripts/security/cloud-rules.mjs ka-clinic-security-test
node scripts/security/cloud-rules.mjs ka-clinic-system
node scripts/security/dependencies.mjs
```

```
vercel env pull .tmp/security/production.env --environment=production --yes
$env:GITLEAKS_PATH='C:/tools/gitleaks.exe'
node scripts/security/secrets.mjs 'C:/short-build/android/app/build/generated/assets/react/release/index.android.bundle'
node scripts/security/report.mjs
```

The cloud verifier uses the installed Firebase CLI's logged-in account and only reads Rules API sources; set FIREBASE_CLI_ROOT when Firebase CLI is installed elsewhere. Secret scanning only prints counts/metadata and redacts Gitleaks findings. Secret values are read from ignored local environment files for exact-value bundle comparison; no environment values are written into reports. An expected nonzero exit from history/dependency scans indicates the documented unresolved items. Run APK artifact checks with `python scripts/security/apk.py <release.apk> <compiled.bundle>`. The optional --emulator switch only inspects the isolated emulator-5580; it does not install or alter accounts. Stored before JSON files are historical evidence; do not overwrite them with current code using --before.

Android release builds should use a short path without spaces, Expo prebuild with the current SDK, and the existing private release keystore. The local generated project needed the Hermes compiler path updated to `node_modules/hermes-compiler/hermesc/win64-bin/hermesc.exe` because its older template referenced the removed React Native sdks path. Generated native files, keystore/passwords, local caches, data backups, .env files and node_modules are excluded from Git/Vercel uploads.

Numbered test cases

1. Role-based access control

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-001	staff cannot invite admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-002	staff cannot revoke admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-003	staff cannot delete admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-004	a cannot invite admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-005	a cannot revoke admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-006	a cannot delete admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-007	b cannot invite admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-008	b cannot revoke admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-009	b cannot delete admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-010	archived cannot invite admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-011	archived cannot revoke admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-012	archived cannot delete admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-013	revoked cannot invite admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-014	revoked cannot revoke admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-015	revoked cannot delete admins	Direct handler request with real Firebase emulator token; simulated documents only.	403 or 401	403 or 401	PASS	PASS	Regression check passed.
API-020	Active staff allowed report email	Direct handler request with real Firebase emulator token; simulated documents only.	200	200	FAIL	PASS	Shared authenticated role/session guards and input ownership validation.
API-021	Patient cannot request admin OTP	Direct handler request with real Firebase emulator token; simulated documents only.	403	403	PASS	PASS	Regression check passed.
API-059	Revoked/disabled admin cannot sign in	Direct handler request with real Firebase emulator token; simulated documents only.	Auth emulator rejects password	Auth emulator rejects password	PASS	PASS	Regression check passed.
API-065	Auth UID fallback refuses an admin record for a different email	Direct handler request with real Firebase emulator token; simulated documents only.	No admin identity resolved	No admin identity resolved	Not in baseline	PASS	Additional verification after remediation.
UI-STAFF	Staff UI hides manager roster	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Patient Records visible; Manage Admins absent	Patient Records visible; Manage Admins absent	Not in baseline	PASS	Additional verification after remediation.
UI-MANAGER	Manager UI includes manager roster	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Manage Admins visible	Manage Admins visible	Not in baseline	PASS	Additional verification after remediation.

2. Incorrect password handling

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-035	Unauthenticated unlock cannot clear lockout	Direct handler request with real Firebase emulator token; simulated documents only.	403; lock remains	403; lock remains	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-036	Five admin wrong passwords cause server lockout	Direct handler request with real Firebase emulator token; simulated documents only.	Five 401 responses; lock set for 15 minutes	Five 401 responses; lock set for 15 minutes	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-037	Correct admin password rejected during server lock	Direct handler request with real Firebase emulator token; simulated documents only.	401 or 429	401 or 429	PASS	PASS	Regression check passed.
API-038	Expired lock permits correct admin password	Direct handler request with real Firebase emulator token; simulated documents only.	200 custom token	200 custom token	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-039	Unknown/known bad admin credentials have same message/status	Direct handler request with real Firebase emulator token; simulated documents only.	Identical status and error	Identical status and error	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-040	Patient password failures rate limited server-side	Direct handler request with real Firebase emulator token; simulated documents only.	Five 401 then 429, including correct password	Five 401 then 429, including correct password	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-041	Recovery does not enumerate admin emails	Direct handler request with real Firebase emulator token; simulated documents only.	Identical generic response	Identical generic response	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-042	Signup does not enumerate MRNs	Direct handler request with real Firebase emulator token; simulated documents only.	Identical generic response	Identical generic response	FAIL	PASS	Server password gateway, persistent attempt buckets and generic errors.
API-064	Legacy mixed-case admin email permits correct login through verified Auth UID	Direct handler request with real Firebase emulator token; simulated documents only.	200 custom token; correct account UID	200 custom token; correct account UID	Not in baseline	PASS	Additional verification after remediation.

3. OTP expiration and abuse

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-043	admin OTP stored hashed; no API/log plaintext	Direct handler request with real Firebase emulator token; simulated documents only.	SHA-256 codeHash, no code or otp field/API code	SHA-256 codeHash, no code or otp field/API code	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.
API-044	admin OTP resend cooldown	Direct handler request with real Firebase emulator token; simulated documents only.	429 within 30 seconds	429 within 30 seconds	PASS	PASS	Regression check passed.
API-045	admin expired OTP rejected	Direct handler request with real Firebase emulator token; simulated documents only.	400	400	PASS	PASS	Regression check passed.
API-046	admin OTP max five wrong attempts	Direct handler request with real Firebase emulator token; simulated documents only.	Sixth attempt 429	Sixth attempt 429	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.
API-047	admin OTP single use under concurrent replay	Direct handler request with real Firebase emulator token; simulated documents only.	Exactly one 200	Exactly one 200	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.
API-048	patient OTP stored hashed; no API/log plaintext	Direct handler request with real Firebase emulator token; simulated documents only.	SHA-256 codeHash, no code or otp field/API code	SHA-256 codeHash, no code or otp field/API code	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-049	patient OTP resend cooldown	Direct handler request with real Firebase emulator token; simulated documents only.	429 within 30 seconds	429 within 30 seconds	PASS	PASS	Regression check passed.
API-050	patient expired OTP rejected	Direct handler request with real Firebase emulator token; simulated documents only.	400	400	PASS	PASS	Regression check passed.
API-051	patient OTP max five wrong attempts	Direct handler request with real Firebase emulator token; simulated documents only.	Sixth attempt 429	Sixth attempt 429	PASS	PASS	Regression check passed.
API-052	patient OTP single use under concurrent replay	Direct handler request with real Firebase emulator token; simulated documents only.	Exactly one 200	Exactly one 200	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.
API-053	Signup completion rejects shared verified flag without caller proof	Direct handler request with real Firebase emulator token; simulated documents only.	403; no account created	403; no account created	FAIL	PASS	Hashed OTP, transactional consumption, five-attempt limit and caller-held signup proof.
API-054	Patient trust token hash, expiry, revocation, cross-account binding	Direct handler request with real Firebase emulator token; simulated documents only.	Only owning account/device accepts unexpired token	Only owning account/device accepts unexpired token	PASS	PASS	Regression check passed.
API-061	Remote patient-device revocation removes trust and server sessions	Direct handler request with real Firebase emulator token; simulated documents only.	Device marked revoked; trust rejected; server session deleted	Device marked revoked; trust rejected; server session deleted	Not in baseline	PASS	Additional verification after remediation.
API-062	Legitimate signup proof creates an account once and still requires login OTP	Direct handler request with real Firebase emulator token; simulated documents only.	Account linked; proof replay rejected; no protected session yet	Account linked; proof replay rejected; no protected session yet	Not in baseline	PASS	Additional verification after remediation.
API-063	Admin trusted-device cookie stores only a 30-day hash	Direct handler request with real Firebase emulator token; simulated documents only.	Secure HttpOnly cookie; SHA-256 hash; trusted shortcut accepts current account	Secure HttpOnly cookie; SHA-256 hash; trusted shortcut accepts current account	Not in baseline	PASS	Additional verification after remediation.

4. Session timeout and logout

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-055	Password-only SDK token cannot use protected admin API	Direct handler request with real Firebase emulator token; simulated documents only.	401 without second factor/gateway	401 without second factor/gateway	FAIL	PASS	Server expiry/revocation and client idle guard.
API-056	Admin idle session expiration enforced by API	Direct handler request with real Firebase emulator token; simulated documents only.	401 after expiry	401 after expiry	FAIL	PASS	Server expiry/revocation and client idle guard.
API-057	Sign-out invalidates server session and clears cookie	Direct handler request with real Firebase emulator token; simulated documents only.	200; cookie Max-Age=0; next API rejected	200; cookie Max-Age=0; next API rejected	FAIL	PASS	Server expiry/revocation and client idle guard.
API-058	Sign out all revokes refresh tokens and all server sessions	Direct handler request with real Firebase emulator token; simulated documents only.	200; session docs removed; old token rejected	200; session docs removed; old token rejected	FAIL	PASS	Server expiry/revocation and client idle guard.
UI-IDLE-WARNING	One-minute idle warning	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Warning visible after 29 minutes	Warning visible after 29 minutes	Not in baseline	PASS	Additional verification after remediation.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
UI-IDLE-EXPIRY	30-minute idle sign-out	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Login visible; dashboard removed	Login visible; dashboard removed	Not in baseline	PASS	Additional verification after remediation.
UI-BACK-AFTER-LOGOUT	Back button cannot expose dashboard	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Login only	Login only	Not in baseline	PASS	Additional verification after remediation.

5. Admin/patient access separation

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-022	Admin cannot enter patient trust/login flow	Direct handler request with real Firebase emulator token; simulated documents only.	403	403	PASS	PASS	Regression check passed.
API-023	Archived patient cannot complete login	Direct handler request with real Firebase emulator token; simulated documents only.	403	403	PASS	PASS	Regression check passed.
API-024	Patient A cannot claim B through push-token registration	Direct handler request with real Firebase emulator token; simulated documents only.	403; B owner unchanged	403; B owner unchanged	FAIL	PASS	Shared authenticated role/session guards and input ownership validation.
API-025	Patient A cannot edit B profile	Direct handler request with real Firebase emulator token; simulated documents only.	403	403	PASS	PASS	Regression check passed.
API-026	Patient A cannot remove B avatar	Direct handler request with real Firebase emulator token; simulated documents only.	403	403	PASS	PASS	Regression check passed.

6. Firebase security rules

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-027	Patient cannot update clinical profile fields	Direct handler request with real Firebase emulator token; simulated documents only.	No write to clinical field	No write to clinical field	PASS	PASS	Regression check passed.
CLOUD-RULES-ka-clinic-security-test	Deployed rules equal repository source	Read Firebase Rules release and referenced ruleset; compare content and SHA-256	Byte-for-byte equality	Byte-for-byte equal	Not in baseline	PASS	Additional verification after remediation.
CLOUD-RULES-ka-clinic-system	Deployed rules equal repository source	Read Firebase Rules release and referenced ruleset; compare content and SHA-256	Byte-for-byte equality	Byte-for-byte equal	Not in baseline	PASS	Additional verification after remediation.
RULE-vaccinations-anonymous-read	anonymous: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-anonymous-create	anonymous: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
RULE-vaccinations-anonymous-update	anonymous: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-anonymous-delete	anonymous: delete vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-own-read	patient-own: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-own-create	patient-own: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-own-update	patient-own: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-own-delete	patient-own: delete vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-other-read	patient-other: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-other-create	patient-other: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-other-update	patient-other: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-patient-other-delete	patient-other: delete vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-staff-read	staff: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-staff-create	staff: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-staff-update	staff: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-staff-delete	staff: delete vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-manager-read	manager: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-manager-create	manager: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
RULE-vaccinations-manager-update	manager: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-manager-delete	manager: delete vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	Allowed	Allowed	PASS	PASS	Regression check passed.
RULE-vaccinations-revoked-read	revoked: read vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-revoked-create	revoked: create vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.
RULE-vaccinations-revoked-update	revoked: update vaccinations	Seed fictional fixture; direct Firebase SDK request with role token.	PERMISSION_DENIED	permission-denied	PASS	PASS	Regression check passed.

LIVE-LOGIN	Live login page renders	Read-only Chrome navigation; no login or record mutations	Login visible; no browser runtime errors	0 runtime errors	Not in baseline	PASS	Additional verification after remediation.
LIVE-MIXED-CONTENT	No mixed-content requests on live login page	Capture browser network requests without signing in	Zero HTTP subresource requests	0 HTTP requests	Not in baseline	PASS	Additional verification after remediation.
LIVE-CSP	CSP permits required login resources	Inspect browser console for CSP blocking	Zero CSP violations	0 CSP violations	Not in baseline	PASS	Additional verification after remediation.
LIVE-ADMIN-PRECHECK	Deployed authentication function initializes and returns expected JSON	POST /api/admin-login; fictional precheck or missing token; no production account/data mutation	200 JSON with success=true	200, JSON, success=true	Not in baseline	PASS	Additional verification after remediation.
LIVE-ADMIN-GUARD	Deployed authentication function initializes and returns expected JSON	POST /api/devices; fictional precheck or missing token; no production account/data mutation	401 JSON with success=false	401, JSON, success=false	Not in baseline	PASS	Additional verification after remediation.
LIVE-PATIENT-GUARD	Deployed authentication function initializes and returns expected JSON	POST /api/send-otp; fictional precheck or missing token; no production account/data mutation	401 JSON with success=false	401, JSON, success=false	Not in baseline	PASS	Additional verification after remediation.
LIVE-ACCOUNTS-GUARD	Deployed authentication function initializes and returns expected JSON	POST /api/admin-invites; fictional precheck or missing token; no production account/data mutation	401 JSON with success=false	401, JSON, success=false	Not in baseline	PASS	Additional verification after remediation.

8. API keys, secrets and dependencies

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-028	Cron dose-sweep rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-029	Cron dose-sweep rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-030	Cron backup-cron rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-031	Cron backup-cron rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-032	Cron patient-archive-sweep rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-033	Cron patient-archive-sweep rejects missing/wrong CRON_SECRET	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
API-034	Unset CRON_SECRET fails closed	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
APK-SIGNATURE	APK signature is valid and matches v1.0.2	Inspect the signed release APK; optional read-only isolated emulator inspection	4fef45c1eae069ede9b94c98567b94116f9765e778257a69ab729a3391b62bfe	4fef45c1eae069ede9b94c98567b94116f9765e778257a69ab729a3391b62bfe	Not in baseline	PASS	Additional verification after remediation.
APK-VERSION	Release package and version allow an upgrade	Inspect the signed release APK; optional read-only isolated emulator inspection	com.anonymous.knarabiesmonitoring; 1.0.3; versionCode 4	package: name='com.anonymous.knarabiesmonitoring' versionCode='4' versionName='1.0.3' platformBuildVersionName='16' platformBuildVersionCode='36' compileSdkVersion='36' compileSdkVersionCodename='16'	Not in baseline	PASS	Additional verification after remediation.
APK-BUNDLE	Packaged bundle equals the final compiled output and includes remote revocation	Inspect the signed release APK; optional read-only isolated emulator inspection	Byte equality; revoke-device present	Byte equal; remote revocation included	Not in baseline	PASS	Additional verification after remediation.
APK-ABIS	Release includes all four Android architectures	Inspect the signed release APK; optional read-only isolated emulator inspection	arm64-v8a, armeabi-v7a, x86, x86_64	arm64-v8a, armeabi-v7a, x86, x86_64	Not in baseline	PASS	Additional verification after remediation.
DEPENDENCIES-server	server dependency audit	npm audit --json in .	Zero published advisories	0 affected package entries; 0 root advisories	Not in baseline	PASS	Additional verification after remediation.
DEPENDENCIES-admin	admin dependency audit	npm audit --json in ka-clinic-admin	Zero published advisories	5 affected package entries; 1 root advisories	Not in baseline	FAIL	Upstream braces/node-forge advisory remains; see limitations.
DEPENDENCIES-patient	patient dependency audit	npm audit --json in patient-app	Zero published advisories	14 affected package entries; 2 root advisories	Not in baseline	FAIL	Upstream braces/node-forge advisory remains; see limitations.
RUNTIME-CJS-JWKS	Firebase Auth/App Check load and RSA JWKS verification without require(esm)	Child Node process disables require(esm); generated test key only; no environment files, credentials or network requests.	SDK imports succeed; valid RSA signature accepted; tampered payload rejected	Imports and signature checks passed	Not in baseline	PASS	Additional verification after remediation.
SECRET-HISTORY	No server secrets in Git history	Gitleaks redacted scan and exact-value search of built client files	Zero server-secret findings	1 findings requiring review; values redacted	Not in baseline	FAIL	Rotate the historic Gemini key; history remains unchanged.

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
SECRET-SOURCE	No server secrets in current tracked and pending source	Gitleaks redacted scan and exact-value search of built client files	Zero server-secret findings	0 findings requiring review; values redacted	Not in baseline	PASS	Additional verification after remediation.
SECRET-BUNDLE-ADMIN	Server-only values absent from client bundle	Gitleaks redacted scan and exact-value search of built client files	Zero matches	62 files; 19 locally configured secret representations; 0 matches	Not in baseline	PASS	Additional verification after remediation.
SECRET-BUNDLE-PATIENT	Server-only values absent from client bundle	Gitleaks redacted scan and exact-value search of built client files	Zero matches	1 files; 19 locally configured secret representations; 0 matches	Not in baseline	PASS	Additional verification after remediation.

9. Unauthorized records and input rendering

ID	Description	Steps	Expected	Actual	Before	PASS/FAIL	Fix
API-016	Unauthorized report export/email	Direct handler request with real Firebase emulator token; simulated documents only.	401 or 403	401 or 403	PASS	PASS	Regression check passed.
API-017	Unauthorized report export/email	Direct handler request with real Firebase emulator token; simulated documents only.	401 or 403	401 or 403	PASS	PASS	Regression check passed.
API-018	Unauthorized report export/email	Direct handler request with real Firebase emulator token; simulated documents only.	401 or 403	401 or 403	PASS	PASS	Regression check passed.
API-019	Unauthorized report export/email	Direct handler request with real Firebase emulator token; simulated documents only.	401 or 403	401 or 403	FAIL	PASS	Shared authenticated role/session guards and input ownership validation.
API-060	Missing manager token rejected before mutation	Direct handler request with real Firebase emulator token; simulated documents only.	401	401	PASS	PASS	Regression check passed.
APK-EMULATOR-LAUNCH	Release app renders onboarding without native/JS crash	Inspect the signed release APK; optional read-only isolated emulator inspection	Onboarding visible; process alive; zero app error logs	Onboarding visible; process alive; zero app error logs	Not in baseline	PASS	Additional verification after remediation.
UI-XSS-NAME	Script markup in a simulated patient name remains text	Headless Chrome against local Vite and Firebase emulators. Browser clock advanced for idle checks.	Literal markup visible; no injected script executes	Literal markup visible; no injected script executes	Not in baseline	PASS	Additional verification after remediation.

Baseline failures preserved

api-before.json

ID	Expected	Actual
API-019	401 or 403	Expected rejection; received 200
API-020	200	Expected values to be strictly equal: 400 !== 200
API-024	403; B owner unchanged	Expected rejection; received 200
API-035	403; lock remains	Expected rejection; received 200
API-036	Five 401 responses; lock set for 15 minutes	Expected values to be strictly equal: 400 !== 401

ID	Expected	Actual
API-038	200 custom token	Expected values to be strictly equal: 400 !== 200
API-039	Identical status and error	Expected values to be strictly equal: 400 !== 401
API-040	Five 401 then 429, including correct password	Expected values to be strictly equal: 400 !== 401
API-041	Identical generic response	Expected values to be strictly deep-equal: + actual - expected { + expiresInMinutes: 10, + maskedEmail: 'ap•••••••@example.test', + success: true - error: 'No clinic account registered with this email.', - success: false }
API-042	Identical generic response	Expected values to be strictly deep-equal: + actual - expected { + error: 'This patient record already has a registered account. Please sign in instead.', - error: 'Patient record not found. Please register at the clinic first.', success: false }
API-043	SHA-256 codeHash, no code or otp field/API code	The input did not match the regular expression /^[a-f0-9]{64}$/. Input: ''
API-046	Sixth attempt 429	Expected values to be strictly equal: 400 !== 429
API-047	Exactly one 200	Expected values to be strictly equal: 0 !== 1
API-048	SHA-256 codeHash, no code or otp field/API code	The input did not match the regular expression /^[a-f0-9]{64}$/. Input: ''
API-052	Exactly one 200	Expected values to be strictly equal: 0 !== 1
API-053	403; no account created	Expected rejection; received 200
API-055	401 without second factor/gateway	Expected rejection; received 200
API-056	401 after expiry	Expected rejection; received 200
API-057	200; cookie Max-Age=0; next API rejected	Expected values to be strictly equal: 400 !== 200
API-058	200; session docs removed; old token rejected	Expected values to be strictly equal: true !== false

Release artifact

APK: kna-clinic-1.0.3.apk (103716703 bytes).

SHA-256: `20faf69cabcbc4a4e11f308d8d78e50481e885b75612456fb335ca9fddb8e469`.

Signing certificate SHA-256: `4fef45c1eae069ede9b94c98567b94116f9765e778257a69ab729a3391b62bfe`, matching the published v1.0.2 certificate. The original private keystore was retrieved from the already-authenticated Expo account and is excluded from Git/Vercel.

On the isolated emulator with a separate private data image, the original v1.0.2 APK was installed, then upgraded using `adb install -r` to v1.0.3. Both installs returned Success; the updated app displayed onboarding with no ReactNativeJS or AndroidRuntime error logs. No production login or clinical data operation was performed. The generated native launcher was updated from the installed Expo SDK template and Windows Ninja was updated to 1.13.2 to complete the native build.
